

ACCELERATING DOCUMENT-BASED DATA READINESS FOR MAINTENANCE AND SUSTAINMENT

Space Force Guardians and Air Force Airmen, regardless of career field, utilize massive documents to tell operators how to do their jobs. These documents hold massive amounts of data that is not easily digested in PDF format (technical orders, training manuals publications, etc.). From maintainers to pilots to support personnel, everyone has the need to digest and internalize training so they can be more effective and improve overall safety.

Easy Data Discovery
Structured & Searchable

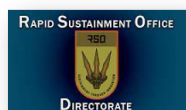

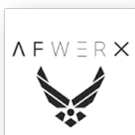

Workflow Integration
Collaborative & API-First

AI solution that ingests, extracts and structures tech data so content developers, can easily use this content in AR/VR/XR/voice/tablet applications

Capability to find specialized maintenance content like fault isolations, flowcharts, warnings, drawings, tasks, procedures and maintenance entities, parts and numbers

REDSHRED' platform is available to any federal customer on a sole source basis via SBIR program."
